Antas da Cunha Ecija has advised VisionWare to assist it in establishing a strategic partnership with Sayeret Innovation SA, a company located in Panama and part of the Sayeret Group, a market leader in the field of security services. This way Sayeret Innovation SA will be able to offer its customers more robust and innovative solutions, especially in the areas of Information Security, Cybersecurity, SOC & Forensics.

The team led by **Amílcar Silva**, partner at Antas da Cunha Ecija, was responsible for drafting the international partnership contract that will regulate the business relationship between the parties. Within the scope of this project, it was also necessary to monitor the negotiations carried out with Sayeret Innovation SA and to make the necessary adjustments to the clauses.

According to Amílcar Silva, partner of Antas da Cunha Ecija: "It was a very complex job, since the area of Cybersecurity is reaching a very high level of demand, however, we are absolutely convinced that the interests of the parties involved are duly safeguarded."

VisionWare is a Portuguese company, founded in 2005, which is dedicated to providing Cybersecurity services through the monitoring and evaluation of organisations' Cybersecurity maturity level, by means of auditing processes. These services include Cybersecurity, Auditing, Computer Security Incident Response Team, Security Incident Analysis (Forensic), Intelligence by Design and Security Operation Center. Recognised as possessing relevant technical capacity by Portuguese and foreign institutions connected to the justice sector and with interest in the security theme, VisionWare is currently present in different geographies, having reached a global dimension through its numerous relevant projects in which it has been involved.
