CCA Ontier advised Portuguese automated border control company Vision-Box on the securing of a 'privacy by design' certification for its identity management software in what is understood to be a first for the industry.

A CCA Ontier statement said that the granting of the 'privacy by design' certification – by Ryerson University in Canada – for Vision-Box's Orchestra 'passenger flow management platform' was the first 'privacy by design' certification for a piece of European identity management software.

Vision-Box is a provider of automated border control and electronic identity management software. It works in partnership with governments, airports and airlines.

The CCA Ontier team included managing associate Martim Bouza Serrano and senior associate Ana Rocha.
