Watson Farley & Williams has advised on a 750 MW PPA with a European investment grade utility company

Watson Farley & Williams has advised Spanish sustainable energy producer Opdenenergy, on the negotiation and execution of a 750 MW ten-year PPA with a European investment grade utility company. It is according to sources, one of the largest bilateral PPAs signed in Europe to date.

The PPA covers 17 projects in the Spanish regions of Teruel, Zaragoza, Badajoz, Cuenca and Valladolid, which will collectively generate enough energy to supply more than 450,000 homes per year.

Opdenenergy is a consolidated and fully integrated independent sustainable energy producer, with over 15 years of experience in solar photovoltaic and onshore wind energy production. It has extensive global sector expertise, with 584MW of operating assets in Spain, Chile, Italy, and Mexico. Furthermore, it also operates in the United Kingdom, France, Poland and the United States, where they are developing a strong pipeline of projects.

The WFW Madrid team advising Opdenenergy was led by Regulatory partner David Díez (pictured left), supported by Corporate senior associate Enrique Thomas de Carranza (pictured top right) and associate Borja Gávila (pictured bottom right).
